

# Progress.Systems

The matrix of services and competencies

**The founders of our company have more than 10 years of experience in managing and implementing business consulting and IT development projects**

We have experience in implementing projects in the following areas:

- Ecosystem solutions
- MVPs for startups and corporations
- Marketplaces / E-commerce / Auctions
- Fintech/ Blockchain
- CRM / ERP / RPA / Document Management
- Business process audit and implementation of operational management model using IT solutions.

**About us**

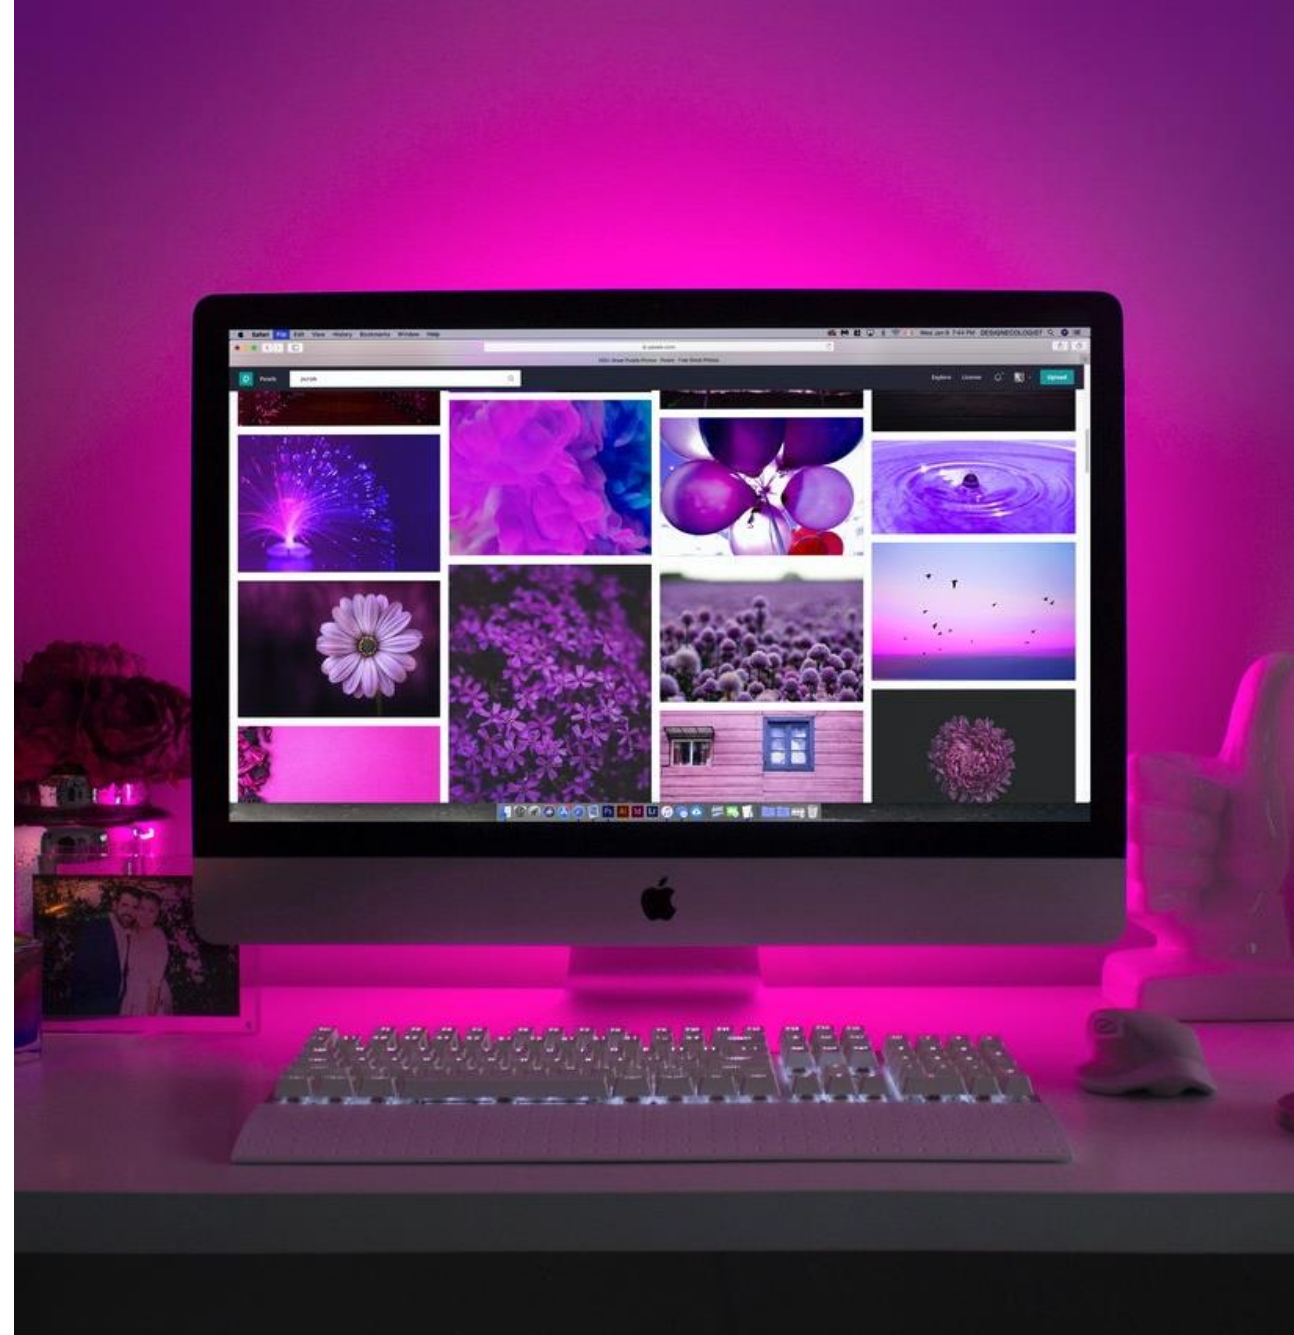

**Progress.Systems**

# Software Development Outsourcing

We will take over the process of websites and applications developing, as well as provide documentation and operation.

This will allow you to:

- Concentrate on the result
- Save money by taking development offshore
- Save on expensive and difficult to managed staff
- Take advantages of our expertise, code base and fine tuned development process
- Reduce the risk of the most common development errors

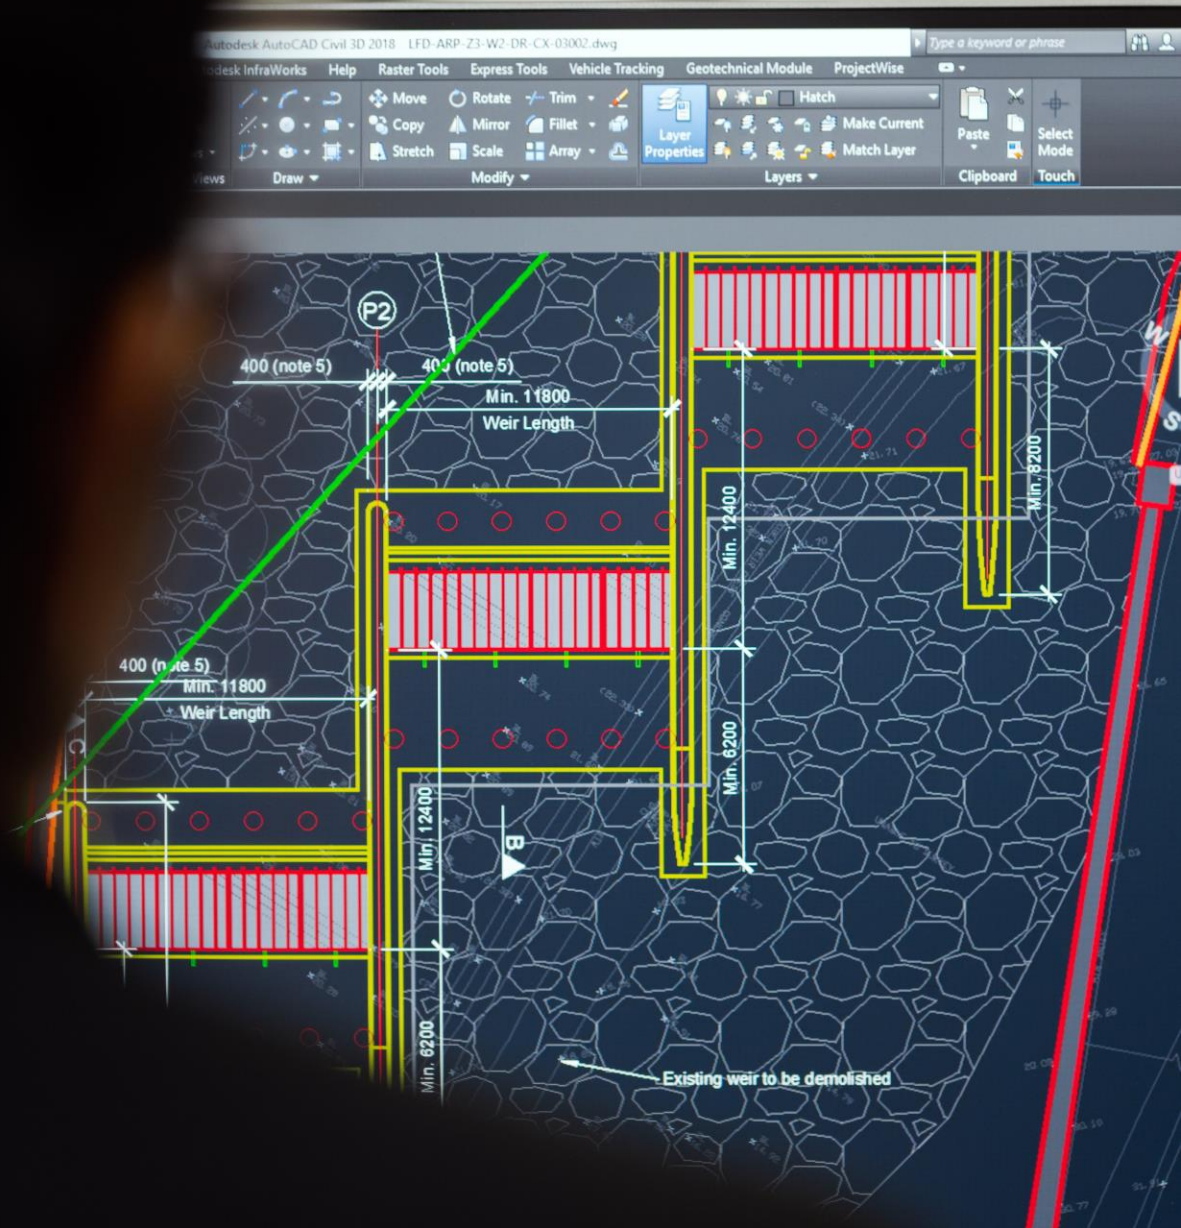

# Audit of your software

We will analyze the state of your IT and development departments

This will allow You to:

- Understand the current state of IT and possible risks better
- Evaluate the quality of the development process and result
- Reduce dependence on software developers
- See the growth points
- Prepare the department for restructuring
- Understand the reasonableness of the spending budget
- Prepare the company for a merger and acquisition

# Development of technical specifications and MVP prototyping

We will analyze business processes and develop the technical specification in accordance with the client's goal.

Ensure sustainable growth from the MVP to the operating system.

# We have experience of solutions in the following areas

MVPs for startups and corporations

Ecosystems

Marketplaces

Media

Banks & Insurance

E-commerce

Auctions

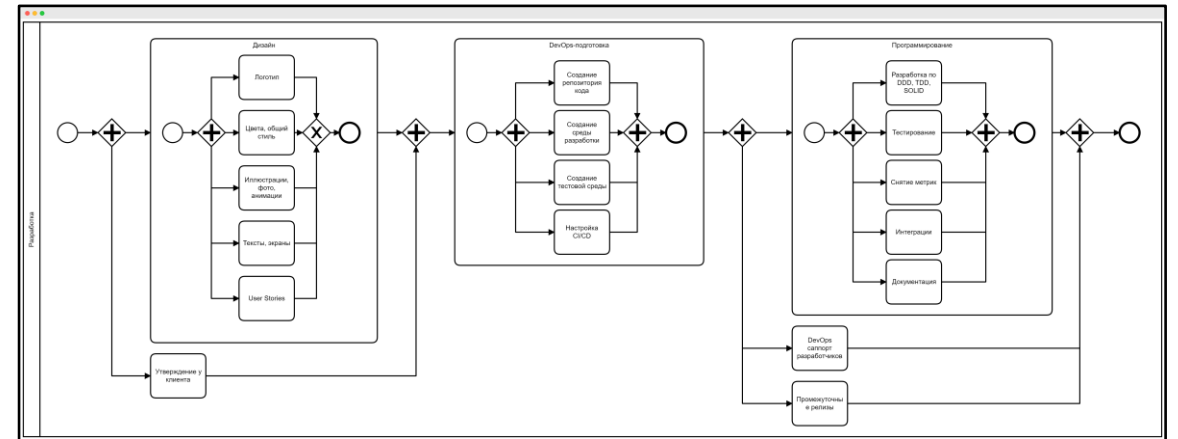

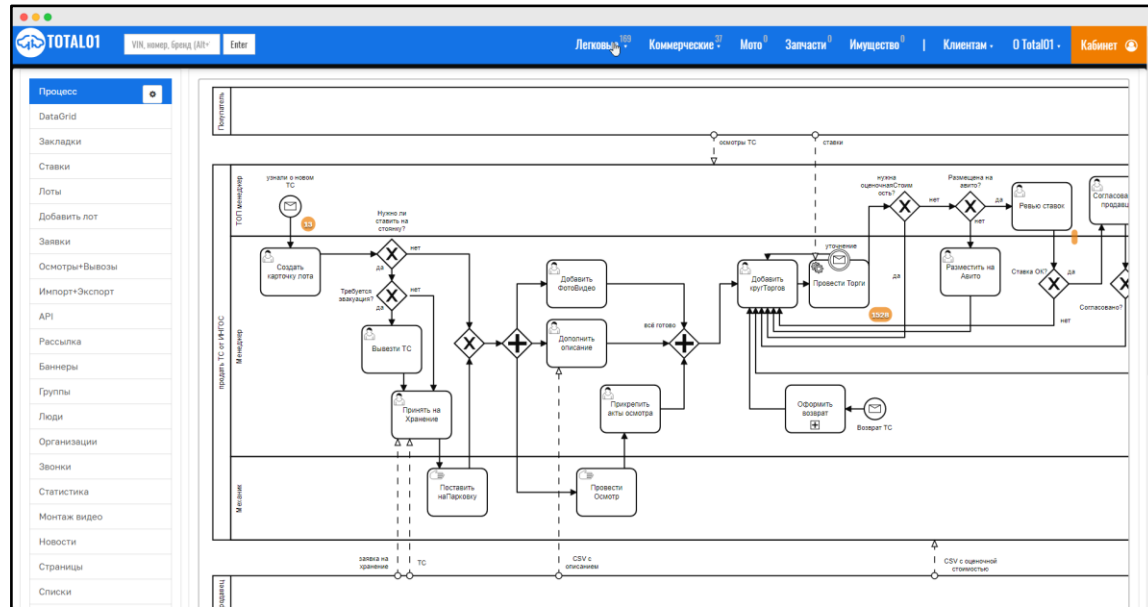

Fintech

Blockchain

## Examples of software modules used

Registration, login	Bills and payments	API for mobile applications
